## **DETAILED ACTION**

### ***Response to Amendment***

The rejection of claims 1-9 under 35 U.S.C. 112, second paragraph as being indefinite and claim 9 under 35 U.S.C. 112, first paragraph as failing to comply with the enablement requirement are moot in view applicants' amendments.

The rejection of claims 1-9 under 35 U.S.C. 103(a) as being unpatentable over Vanderbilt et al, 3,350,345 in view of Augier et al, 5,713,246 is withdrawn in view of applicants' arguments.

### ***Information Disclosure Statement***

The examiner has considered the US references and English abstracts submitted in the IDS of August 29, 2006.

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Augier et al, 5,736,246 (Augier).

Augier teaches reinforcing glass strands coated with a sizing composition of the type contemplated by applicants, comprising at least one silane satisfying the formula:

Art Unit: 1774

wherein  $R^1$ ,  $R^2$ , and  $R^3$ , are essentially the same as applicants, and  $R^4$  satisfies the formula:

$R^5\phi R^6$ , wherein  $R^5$  optionally contains an amine and can be a branched hydrocarbon chain having 4 to 20 carbons and  $R^6$  is an unsaturated chain. See abstract, column 5, lines 51 through column 6, and line 32. It should be noted that  $R^9$  of the instant claim does not necessarily exclude a ring structure. As to claims 1-2, 8 and 10-11, the silane taught by Augier has a backbone structure that is sufficiently similar to that set forth in the instant claims, such that one of ordinary skill in the art would expect the prior art silane and sizing composition to have similar properties, in the absence of factual evidence to the contrary.

In addition, as to claims 3-5, Augier teaches that his composition further comprises a  $\gamma$ -methacryloxypropyltrimethoxysilane, at least one bonding agent and lubricating agent. See column 6, lines 50-55, column 7, line 30 and column 8, line 5.

Regarding claim 9, Augier teaches the formation of composites. See column 8, line 9.

Therefore, the prior art teachings of Augier would have rendered obvious the invention as claimed in present claims 1-11.

### ***Response to Arguments***

3. Applicant's arguments with respect to claims 1- 9 have been considered but are moot in view of the new ground(s) of rejection.

Applicants' arguments with respect to the comparative data in the specification has been noted, but is not found to be persuasive to overcome the prior art rejection. In

Art Unit: 1774

particular, Augier teaches a sizing composition that is substantially similar to that of the instant claims and there is no evidence on this record of superior or unexpected properties of the instant invention over the prior art.

No claims are allowed.
